

WE ARE HIRING

ARE YOU ABLE TO SHOW A DIFFERENT LIGHT
ON THIS? THEN WE ARE LOOKING FOR YOU.

*Then
we're
looking
for you!*

Lighting designer with project planning skills

There's no such thing as a typical interior design. At least not with us. That's because every project is unique. This calls for solutions that are often innovative. These solutions arise from thinking differently, seeing differently, as if you're seeing the space for the first time.

We design healthy spaces with biodynamic lighting installations. They are part of modern interior architecture. This goes beyond just the interior. Starting with the functional design, we create a healthy living environment, where we've carefully considered sufficient (and the right) light and enough oxygen to maintain good concentration.

Does that appeal to you?

With us, you'll work in a small, close-knit team to design lighting plans from a 3D perspective. You'll step into the space, observe sightlines, and collaborate closely with your interior colleagues at Studio LRO BV. Lighting and interiors are inextricably linked. You'll regularly join projects and liaise with installers and consultancy firms throughout the project.

You'll prepare lighting calculations, review them, and incorporate them into clear presentations.

You're interested in new lighting control methods and are curious about the latest developments.

You'll contribute ideas and clearly present the new lighting design to the client, simplifying our complex world for them.

In our small team, we're also looking for someone who can maintain an overview, keep us informed about the progress and feasibility of our own project schedules, and monitor our processes. It's a small but significant challenge within this role.

Skills

- You have demonstrable experience with lighting design in projects or a demonstrable interest in developing this skill.
- You are adept at reading construction drawings.
- You are proficient in Vectorworks or are interested and able to develop these skills.
- You are proficient in Dialux Evo or can quickly master it.
- You are skilled in creating well-readable presentations in PowerPoint or similar formats.

Education

Your work and thinking level is HBO (higher professional education) or MBO (intermediate vocational education) with relevant experience.

We need you immediately for 2 days a week, with the possibility of 4 days. Are you willing to shed some light on the matter from a different perspective?

Are you able to show a different light on this?

Are you our new lighting designer, interested in project planning? Missing some of the listed qualifications but still excited by this opportunity? Don't hesitate to get in touch! Call or email us right away.
