

WE ARE HIRING

*Can you see your studies in a new light?*

*Then  
we're  
looking  
for you!*

We are looking for an **Industrial Design student** (Master's or final year of Bachelor's) who wants to explore how lighting design interacts with interior design and shapes the user experience of spaces. A student who, like us, believes that light is a powerful design layer capable of influencing well-being, behavior, and interaction.

### Why is this interesting for you as an Industrial Designer?

In Industrial Design, you work extensively with human-centered design, material-technology integration, intelligent systems, prototyping, and experience design. This exact combination fits perfectly within our work.

With us, you will have the opportunity to:

- Approach light as an experience, not just as a technical element.
- Explore how light influences behavior, health, stress, focus, and creativity.
- Contribute to innovations in Biophilic Design and "healthy lighting" for educational, healthcare, and workplace environments.
- Connect your design choices to technology, sensors, dynamic lighting, and spatial context—a method that aligns closely with ID practices.

What are we looking for in an Industrial Designer?

Someone who:

- Is curious about both the technical side of light and the experience it creates.
- Has an affinity for digital tools (3D, Vectorworks, InDesign, and Dialux).
- Can bridge the gap between people, technology, and space.
- Is eager to take on a substantial graduation project with guidance from both lighting design and interior architecture perspectives.

We have several project topics ready that align with Industrial Design profiles: from adaptive lighting, healthy lighting strategies, and nature-inspired systems to interaction design with light.

What will you do?

- Work in Vectorworks 3D on spatial designs;
- Learn Dialux and translate lighting calculations into design decisions.
- Support and help develop workshops on healthy lighting and biophilic design;
- Collaborate with both lighting designers and interior designers at Studio LRO.
- Participate in projects and see your designs realized in practice.
- And, of course, work on a unique graduation project that fits your ID profile (Research, Create, Build, Evaluate).

What do we offer?

- An open and close-knit team that loves to collaborate.
- Your own dedicated workspace.
- Plenty of room to experiment and build in our own expo space.
- Projects where you can truly make an impact on health and well-being in buildings.
- And... if the collaboration goes well, potentially a fantastic job opportunity.

Are you our new Industrial Design intern or graduate student? Interested in project planning? Missing some of the listed qualifications but still excited by this opportunity? Don't hesitate to get in touch! Call or email us right away.
